Rahima Malik

rahimamalikmalik2@gmail.com | rahima-malik | rahima-malik-75034a404 | Rawalpindi, Punjab, Pakistan

Summary

Junior year Data Science student with skills in Python, C++, and data analysis. Passionate about transforming complex data into meaningful insights and developing practical solutions through programming and analytical problem-solving

Experience

The Volunteers Society January 2025 – Present
Volunteer Islamabad, Pakistan

- Actively participated in community service and humanitarian initiatives, supporting elderly individuals and underserved communities.
- ollaborated with fellow volunteers to promote social responsibility, strengthen community engagement, and create a positive social impact.

Projects

WhatsApp Message Automation
Tools: Python, PyWhatKit, Task Scheduling

- Developed a Python-based automation application to schedule and send WhatsApp messages at specified times using automated workflows.
- Implemented input validation and exception handling to improve application reliability and prevent unexpected errors.
- Integrated PyWhatKit with WhatsApp Web to automate message delivery and reduce manual effort.

Patient Triage & Appointment Management System
Tools: C++, Object-Oriented Programming (OOP), Arrays, Dynamic Memory Management

- Developed a console-based patient triage system in C++ to manage patient registration and waiting queues according to medical priority levels.
- Implemented priority-based sorting to ensure critical and emergency patients are attended to before general patients while maintaining arrival order for patients with equal priorities.
- Applied OOP concepts, including Abstraction, Inheritance, and Polymorphism, using an abstract Patient class and specialized patient subclasses.
- Implemented exception handling and dynamic memory management to improve application reliability and resource management.

GitHub Repository: https://github.com/rahima-malik/Patient-Triage-Appointment-System

ATM System Demonstration
Tools: C++, Console Application, Programming Logic

- Developed a C++-based ATM simulation featuring PIN authentication, balance inquiries, cash deposits, and withdrawal operations.
- Implemented transaction validation and balance management to maintain accurate account balances during simulated banking operations.
- Designed an interactive console interface with appropriate input validation and transaction feedback.

Skills

Programming Languages: Python, C++, SQL.
Data Science: Data Analysis, Data Literacy, Data Interpretation, Analytical Thinking.
Programming Concepts: Object-Oriented Programming (OOP), Abstraction, Inheritance, Polymorphism, Exception Handling.
Python & Automation: Python Programming, PyWhatKit, Task Automation.
Tools & Platforms: Git, GitHub, Visual Studio Code.
Currently Learning: Data Science, Advanced Python Programming, Data Analysis.
Soft Skills: Problem Solving, Logical Thinking, Communication, Team Collaboration, Leadership, Community Engagement.

Education

Pak-Austria Fachhochschule: Institute of Applied Sciences and Technology Haripur, Pakistan
Bachelor's Degree in Data Science
KIPS Education System
Intermediate in Computer Science (FCS) 2023 – 2025

Certifications

- IBM SkillsBuild — Data Literacy
- Introduction to C++

Leadership Experience

The Volunteers Society January 2025 – Present

- Participated in community welfare and humanitarian activities supporting elderly individuals and underserved communities.
- Collaborated with volunteers to promote social responsibility, teamwork, and community engagement.
- Contributed to initiatives focused on creating a positive social impact through volunteer service.
